

E3 INNOVATE IS YOUR HEALTHY-HOME EXPERT

Let us show you how to make your house a healthy and efficient home.

AIR LOSS

Proper air sealing prevents drafts, improves comfort, and reduces energy waste.

VENTILATION

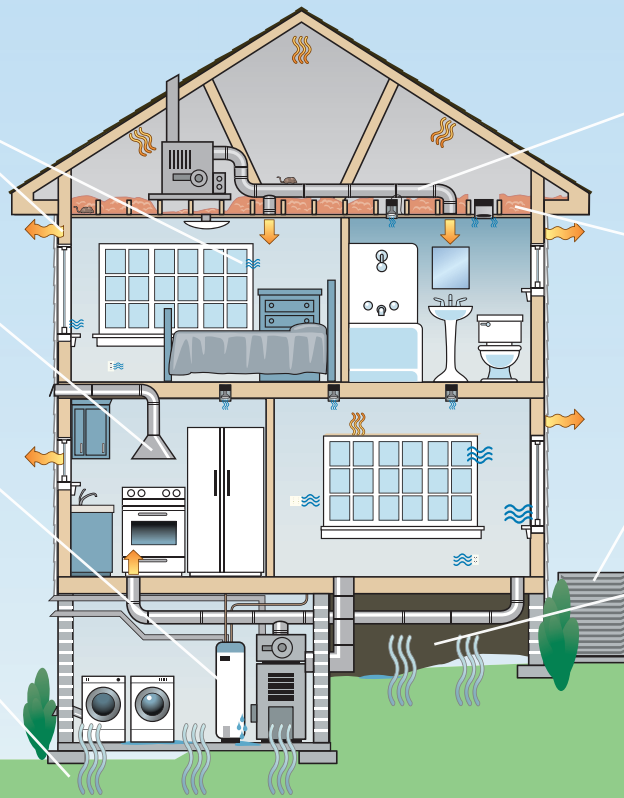

Reduces harmful airborne particulates and allergens.

WATER HEATING

An energy efficient water heater is a great way to experience energy savings and performance.

RADON

Radon is a radioactive gas you can't see, feel, taste, or smell and is the second leading cause of lung cancer.

DUCT WORK

Improperly sealed duct work is an invitation for pests, mold and mildew to enter your home.

INSULATION

Poor insulation creates gaps and cracks in the thermal barrier.

HVAC

A proper sized HVAC system can help reduce humidity problems.

CRAWLSPACE

A properly sealed crawlspace reduces the risk of mold, rot, and helps keeps pests and insects out.

I think my house is making me sick...

I get headaches, sinus congestion, and feel dizzy, but it all goes away when I leave home.

My house smells musty and damp...

The odor is worse after it rains and the house always feels humid in the summer.

My HVAC needs to be replaced soon...

How much longer will it last and, when the time comes to replace it, what are my options?

A Clear Plan of Action.

Home issues don't start in a single place, they come from all sides, and often without warning. Take the confusion out of home performance issues and call the experts at E3 INNOVATE today.

Whole Home Assessment Options

Healthy Home Consultation

Do you have questions about a particular concern in your home and want answers? This 90-minute consultation offers you an in-depth discussion with an experienced E3 Home Performance expert. Our building scientists will listen to your concerns and ask targeted questions to identify likely causes of the issue you're experiencing. This is your time to ask the experts questions and learn how your house is working, or not working. We also provide a diagnostic indoor air quality test* and summary report to help you gain clarity and feel confident in making home improvement decisions. - \$600

Diagnostic Assessment

Are you experiencing comfort, indoor air quality, or energy efficiency issues but aren't sure where the problem is coming from or how to fix it? That's where diagnostic testing comes in. Our building scientists perform a number of tests to uncover the root cause. They also complete a thorough inspection of the attic and basement or crawlspace and mechanical systems. The auditor will use this information to prepare a customized action plan and proposal for addressing the issues and improving your home's overall performance. We schedule a follow-up meeting with you to go over all the results so you're never left in the dark. **\$1395 +** (details below)

What's included in the Diagnostic Assessment?

Think of this service as a detailed audit. We use specific tools to identify challenging issues related to comfort, indoor air quality, odors, moisture, mold, energy efficiency, and more. Here's what's included:

- Diagnostic Home Leakage Testing [\$0.15/sqft above 3,000 sqft; \$3.10 /mile outside 20 radius of TN State Capital]
- Diagnostic Duct Leakage Testing [Includes one duct system; \$240 /additional system]
- HVAC Equipment Evaluation
- Attic Inspection
- Crawlspace or Basement Inspection
- Thermal Imaging
- Bathroom Exhaust Testing
- Two Professional 10-day Radon Tests

Let E3 INNOVATE keep your home healthy and free from the things that could be harming you and your family.
